MODEL INTEGRATION AND TESTING

Date	15 November 2022
Team ID	PNT2022TMID13084
Project Name	Flight Delay Prediction Using Machine Learning

DEVELOPMENT PHASE:

During this phase we have planned for training the model on IBM where we will register for IBM cloud, train the ML model on IBM and integrate flask with scoring end point.

Registered on IBM cloud and activated watson machine learning, cloud storage and watson studio then trained the ML model on IBM using API KEY.

Created a python notebook compatible with IBM cloud.

```
In [193]:
            import os, types
            import pandas as pd
            from botocore.client import Config
            import ibm_boto3
            def __iter__(self): return 0
            # @hidden cell
            # The following code accesses a file in your IBM Cloud Object Storage. It includes your credentials. # You might want to remove those credentials before you share the notebook.
            cos_client = ibm_boto3.client(service_name='s3',
                 ibm_api_key_id='BGfN6kxTOYC8cVw9eyojsnDinGv0bDBu8u2OJGVPsM18',
                 ibm auth endpoint="https://iam.cloud.ibm.com/oidc/token",
                 config=Config(signature_version='oauth'),
                endpoint_url='https://s3.private.us.cloud-object-storage.appdomain.cloud')
            bucket = 'flightdelay113-donotdelete-pr-b9qh0sw8dleyxc'
            object_key = 'flight-1.csv'
            body = cos_client.get_object(Bucket=bucket,Key=object_key)['Body']
            # add missing __iter__ method, so pandas accepts body as file-like object
if not hasattr(body, "__iter__"): body.__iter__ = types.MethodType( __iter__, body )
            data = pd.read csv(body)
            data.head()

After successful deployment into IBM the same is integrated with flask file using api key and scoring endpoint.
